

AVON is the world's leading direct seller of beauty and related products and one of the UK's leading sellers of mass beauty products. Avon markets to women in over 100 countries through 5.5 million independent sales Representatives - often fondly known as the Avon Ladies. Avon Cosmetics head offices are in Northampton and has a national distribution centre in Corby.

In their Corby national distribution centre we were advised that the production flooring required resurfacing. The existing floor had damaged areas of screed due to movement and the initial steels were installed too close to the surface. Therefore the existing floor required extensive repairs prior to the resurfacing works. The floor area which required attention measured approximately 14,000 square metres.

Richco recommended that all damaged areas of floor were removed and repaired using either: Richco Rapid Epoxy Repair, Richco Polymer Enhanced Screed or Richco SBR Screed depending on the area of flooring and the repair required.

Once the floor had been fully prepared and all repairs completed, Richco application team applied Richco Liquid Vinyl. This material was recommended due to the flexible nature of this product and the issue of the movement on this particular floor.

Richco Liquid Vinyl is a heavy duty self levelling resin system which gives excellent resistance to abrasion and chemical attack whilst providing a seamless finish. Richco Liquid Vinyl was applied in two colours throughout the production floor. The main areas were applied in dark grey and all walkway areas were applied in safety yellow to provide a contrasting colour for pedestrians.

All flooring areas were completed in phases to ensure that there was minimum disruption to the client during all preparation and application of our product. The completed flooring areas provide a hardwearing industrial flooring system whilst providing a seamless finish.
